

8ft Thick Core Peeling Machine

Thick core veneer peeling machine is one of important equipment for plywood production, it rotary cuts the wood log into 1-10mm core veneer. It is mainly used to make the furniture plywood, ecological board and other kind of plywood. It is suitable for big diameter wood log and diameter can be up to 1300mm. The machine can be customized according to client's requirement.

FEATURES:

1. It is used to rotary cut the big diameter wood and wood diameter can be up to 1500mm.
2. TAIWAN DELTA brand inverter and FRANCH SCHNEIDER electric components, machine runs stably.
3. The whole structure is welded by the Q235B steel and channel steel, it is durable.
4. Rotary cutting accuracy, quick speed, veneer surface smooth.
5. Whole machine chuck system is controlled by hydraulic station, adopt double chucks design, make the left core after peeling can reach min.

TECHNICAL PARAMETERS:

Structure:	Vertical
Wood length:	2000mm-2600mm
Max. wood diameter:	1300mm
Remaining wood Min. diameter:	160mm
Veneer thickness:	1mm-10mm
Motor brand:	CHINA HUALI
Peeling speed:	10-40m/min
Total power:	69.6kw
Inverter:	TAIWAN DELTA
Voltage and frequency:	380V, 50HZ
Gearbox:	CHINA brand
Pressure bar:	Electric
Peeling knife:	HSS(high speed-steel)
Machine weight:	about 23000KGS
Machine dimension:	6000*2300*2600mm
